

## Permanent Makeup Healing Schedule Eyebrows

### Eyebrows Day & Effect

#### **Day 1:**

The eyebrows are approximately 25-40% darker and bolder in width than they will be when healed. Your skin is red under the pigment, which causes the color of the pigment to appear darker and the pigment is fresh. There is some swelling, although difficult to actually see due to the thickness of the skin in the eyebrow area. This will subside. Exfoliation/Shedding, which begins in a few days, will cause the excess pigment surrounding the eyebrow procedure to flake away and a more narrow appearance will result. New skin will heal over the pigmented area and result in a softer appearance of your eyebrows. Don't be concerned that your eyebrows initially appear darker and heavier in size than you desire. This is all a part of the process.

#### **Day 2:**

Conditions remain the same. If tender, use cold compresses/ice/frozen peas. Use balm or Vaseline and keep moist at night.

#### **Day 3:**

Eyebrows may start to itch and will appear a bit thicker in texture. This is light "scabbing" that is normal. DO NOT PICK!

#### **Day 4:**

Exfoliation/Shedding begins. The skin begins to flake, peeling usually begins from the outside edges first. DO NOT PICK! This could remove pigment and cause an uneven appearance. Keep moist and use balm or Vaseline.

#### **Day 5 - 7:**

Color finishes flaking off and appears softer and grayer for a few days until color clarifies.
